An Ethernet Over Copper Product

Stop waiting for fiber to be delivered to your office to experience light speed broadband. Datavo can deliver massive broadband to your location without the construction costs.

Datavo Ethernet over Copper is an ideal alternative for T1 and bonded T1 customers who are looking to upgrade their bandwidth. Datavo provides EoC products at 6Mb, 10Mb, 20Mb, 30Mb and 50Mb. One of the great advantages of Ethernet over Copper is that it is delivered over the existing telephone lines and does not require expensive fiber build outs. Also, Ethernet over Copper is much more reliable than T1s and DS3 circuits because it uses multiple telephone lines; therefore, if a single line were to go down you do not lose connectivity. In addition, our Ethernet over Copper products include one static subnet or four assignable IP addresses.

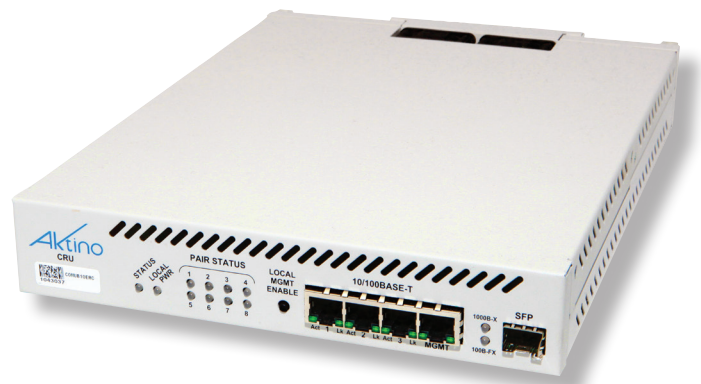

Enterprise Broadband Service Features

- Point-to-point and multipoint service configurations.
- Bandwidth options from 6Mbps to 50Mbps.
- Secure and reliable service, with Service Level Agreement (SLA) goals of 99.9% availability with Quality of Service (QoS) feature.
