Features

You can use the **On Your Computer** link under the main **Apps** tab to download myDatavo Assistant, which allows you to:

- see a pop-up that appears whenever you receive an incoming call, allowing you to choose to redirect the call to another number or decline the call
- receive notifications of new voicemail messages
- access contacts and synchronize these with your Outlook contacts
- configure call services from your desktop

Figure 1. Download myDatavo Assistant

Introduction

myDatavo Assistant runs on your own PC, offering a convenient and fully-integrated route into your myDatavo, myDatavo SmartLine or myDatavo SmartBiz account. Using the toolbar you can carry out a number of tasks, all from your PC:

- enable a pop-up that appears when you receive an incoming call on the telephone number you used to log into myDatavo Assistant—if you do not want to answer the call, you can use the pop-up to either decline the call or redirect it to another telephone number
- see when you receive new messages in your myDatavo Assistant mailbox
- search your contact lists and place calls to those contacts
- make instant changes to your call settings, for example to send calls to voicemail
- synchronize your myDatavo Assistant contacts with your Microsoft Outlook 2003 or 2007 contacts
- place calls with one click from inside Microsoft Outlook

Before you can make use of the features of myDatavo Assistant, you must first install it on your computer, as described in section 1.

Section 2 describes various configuration tasks that you may need to perform to ensure that your myDatavo Assistant Settings are correct.

Once you have installed and, if necessary configured, myDatavo Assistant, section 3 summarizes the features available to you. To explore these features in more detail, refer to the Tutorial Videos in the Support section of the Datavo website.

1. Installing myDatavo Assistant

You can download and install myDatavo Assistant from within Datavo's web-based tool, myDatavo Web Portal.

1.1 System Requirements

The PC onto which you want to download myDatavo Assistant must have at least 3MB of disk space for installation and be running:

- Windows XP (Service Pack 2 or later), Windows 2000, and Windows Vista, or Windows 7
- Internet Explorer 6.0 or above, or Firefox 2.0 or above, Safari, or Google Chrome

myDatavo Assistant also requires .NET 1.1, a component of the Windows operating system. Most PCs already have .NET 1.1. However, if you do not have .NET 1.1 installed on your computer, the installation process will provide you with a link to download it from Microsoft and install it on your PC. This download is free.

You also need administrator privileges to install myDatavo Assistant. You will usually have these privileges if you are installing the software on your own computer, but you may need to contact your network administrators if you are using a company-owned PC or are in a similarly controlled environment.

1.2 Downloading myDatavo Assistant

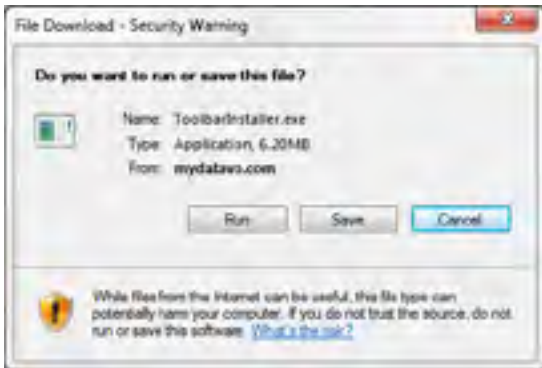

- Log into your account using myDatavo Assistant.
 - From your web browser enter the myDatavo Assistant URL in the address bar:
<http://mydatavo.com>
 - Log in using your telephone number, and your PIN or password (whichever you normally use to access myDatavo Assistant).
- Click **Apps** on the navigation bar.
- Click **Assistant**.
- You are then taken to the myDatavo Assistant display, from where you can download the tool. This display also shows the minimal system requirements for downloading and using this tool, as described in section 1.1.

Figure 2. The myDatavo Assistant download page

- Click **XP / Vista / Windows 7** to download the installation package **ToolbarInstaller.msi**. You will see a pop-up dialog box similar to that illustrated in Figure 3.

Figure 3. Security warning on download of myDatavo Assistant installation package

- Click **Run** to install myDatavo Assistant immediately, or **Save** to download it and install it at a later date.

1.3 myDatavo Assistant Installation Wizard

Once you have downloaded myDatavo Assistant, you can use the myDatavo Assistant Setup Wizard to install the toolbar on your PC.

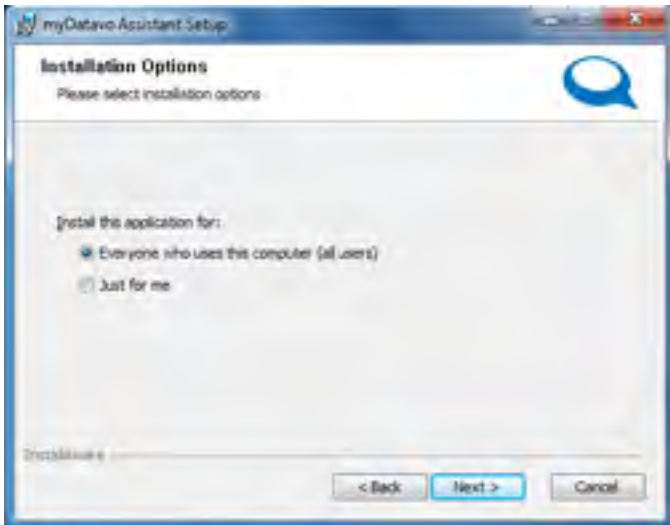

Figure 4. myDatavo Assistant installation Wizard

- If you chose **Run** when prompted by the dialog box in Figure 3, the installer will launch automatically. If you chose **Save**, when you are ready to begin installing myDatavo Assistant, open the location you saved it to and double-click the **Toolbar Installer** icon.
- If you are using Windows Vista, a security dialog may appear, asking you to confirm that you wish to install the new software. Select **Allow** or **Continue** to proceed with the installation.
- The myDatavo Assistant Setup Wizard begins.

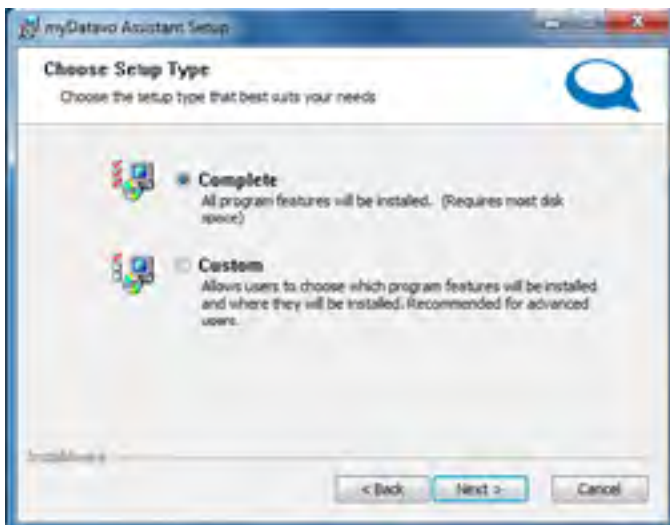

- Click **Next**, then read the End User License Agreement. If you accept it, select **I accept the terms in the License Agreement** and click Next again.
- If your computer supports multiple users, you must then select whether you want to make the tool available to all users, or only to you. This choice is illustrated in Figure 5. Even if you choose to make the tool available to all users, your myDatavo Assistant account remains secure. Each user must enter their own login details to access their mailbox on myDatavo Assistant.

Figure 5. Selecting the users on the PC for whom myDatavo Assistant is available

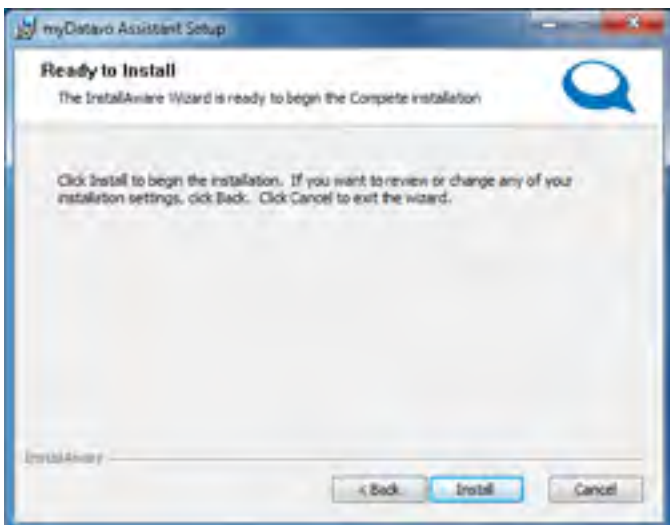

- You are then asked whether you want to install the complete package or a custom package, as shown in Figure 6.

Figure 6. Selecting a complete setup

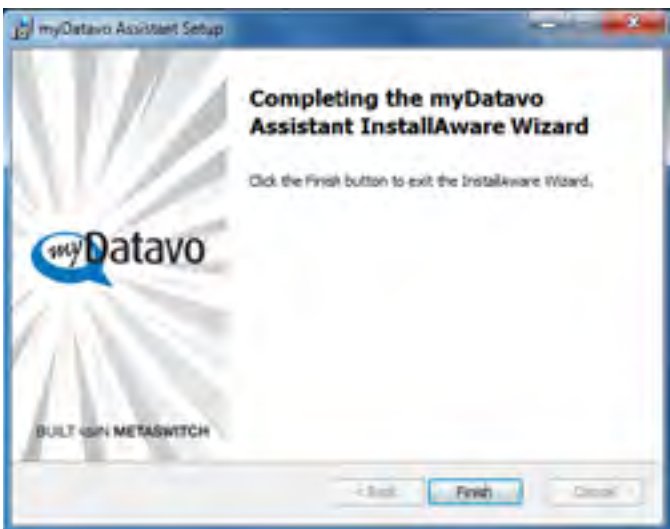

- If you are an experienced user, you may wish to select custom options. Otherwise, we suggest you install the complete package. Select **Complete** and then click the **Next** button.
- Finally, you are asked to confirm your settings, as shown in Figure 7. Select Install to continue.

Figure 7. Initiating the Installation

- myDatavo Assistant is then installed on your PC using the settings you configured.
- Once complete, you are given the option to start the toolbar, as shown in Figure 8. Select **Launch myDatavo Assistant** and click **Finish** to start using the feature immediately

Figure 8. Installation Complete

- Finally, verify that myDatavo Assistant appears in your Windows Taskbar and Notification area (usually towards the bottom-right of your screen). This is illustrated in Figure 9.

Figure 9. The myDatavo Assistant and Notification area icons on the Taskbar

- If myDatavo Assistant is not visible, right-click on your Windows Taskbar, select Toolbars, and then click my Datavo Assistant.
- If you have Outlook 2003 or Outlook 2007 installed on the same PC as myDatavo Assistant, the first time you launch the toolbar you will see a balloon message alerting you to myDatavo Assistant's synchronization feature. This feature enables you to automatically synchronize your myDatavo Assistant and Outlook contacts once you have set up the necessary configuration, as described in section 2.3.

This completes the installation process for myDatavo Assistant.

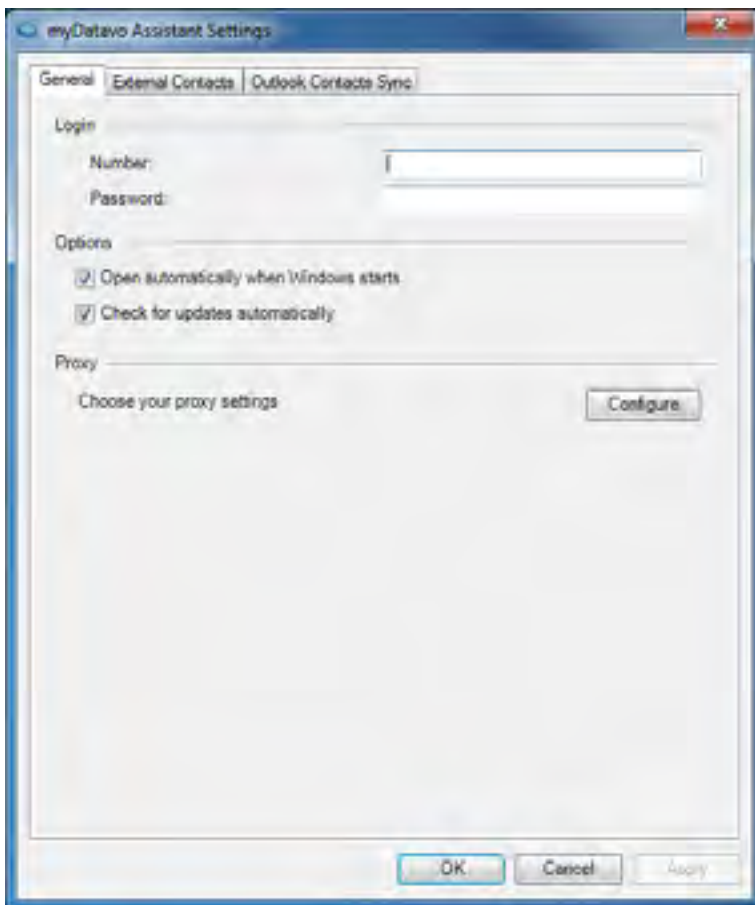

2 Configuring myDatavo Assistant Settings

If you want to alter your settings, for example to exclude Business Group contacts from searches, you will have to configure your settings manually as follows:

- Right-click on the myDatavo Assistant notification icon.
- Select **Configure** to launch the **Settings** menu.

The dialog box shown in Figure 10 appears. If you also have the Incoming Call Popup feature, you will see a fourth tab on this menu, **Incoming Calls**.

Figure 10. myDatavo Assistant Settings Menu

The **Settings** dialog boxes display the details that myDatavo uses to access your account. The **General**, **External Contacts** and **Outlook Contacts Sync** tabs are each described below.

2.1 General Tab

This screen is split into a number of sections.

The **myDatavo credentials** section contains the following fields:

- **Number**: this is the phone number you use to access your myDatavo account.
- **Password**: this is the password used to access your myDatavo account.
- **myDatavo url**: this is part of the web address used to access your myDatavo account.
- **Customization**: this specifies which version of myDatavo you use. For example you may use a different language, or have chosen a specific appearance for your myDatavo interface.

The **Proxy configuration** section contains information used to access your account. Datavo will tell you if you need to use **No proxy** or **Manually configure**, otherwise you should just select **Use default proxy**.

The **Options** section allows you to alter the behavior of myDatavo.

- **Open automatically when Windows starts**: check this if you want the toolbar to open each time you turn on your computer.
- **Display a popup when a new voicemail arrives**: check this if you want an on-screen dialog box to popup each time a new voicemail is delivered to your account.
- **Check for updates automatically**: check this if you want myDatavo to find out and tell you if there are updates available.
- **Include Business Group contacts in searches**: check this if you want myDatavo to return results from your Business Group contacts as well as your personal contacts when you type in the toolbar's input field. This item is enabled by default, but will not be shown if you are not a member of a Business Group.
- **Voicemail popup duration (seconds)**: this determines for how long your popup dialogs are visible before they disappear. Remember that, if you have unheard voicemails, the notification icon will change color as well.

Once you have completed all these fields, you should either select one of the other two tabs—for example if you want to enable Contact Synchronization as described in section 2.3—or click **OK** to save your changes and close the **Settings** tab.

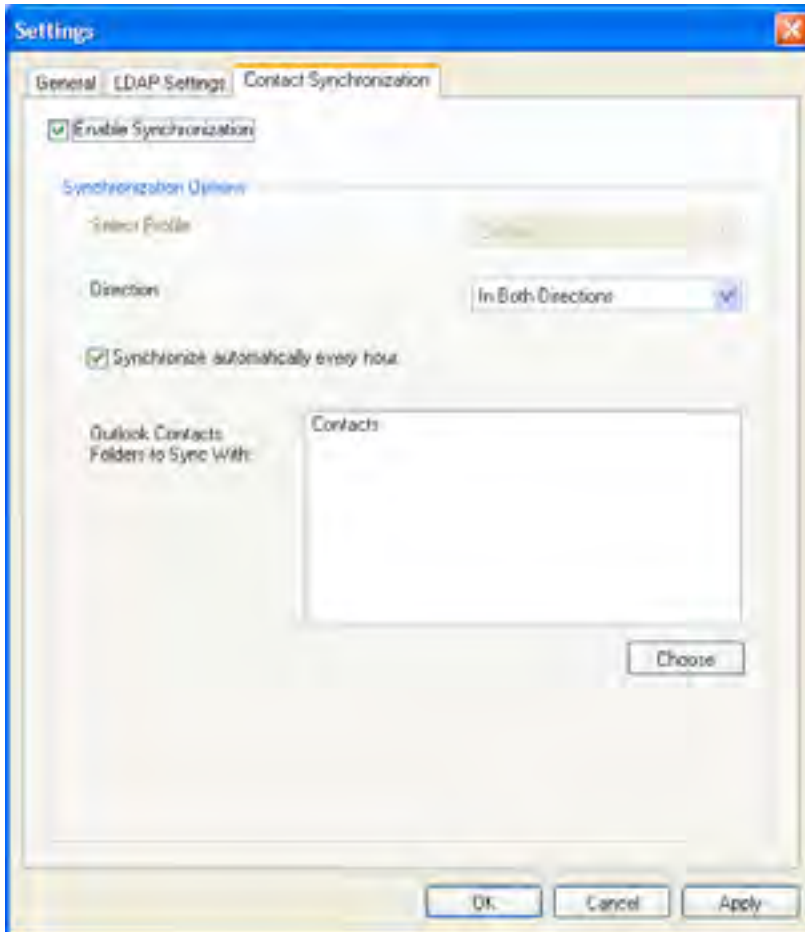

2.2 Reserved

Reserved for later use.

2.3 Contact Synchronization tab

If you have Outlook 2003 or Outlook 2007 installed on the same machine as myDatavo Assistant, and have configured at least one profile within Outlook, you will also see the **Outlook Synchronization** tab illustrated in Figure 11. This enables you to configure the options for synchronizing any changes made to your Contacts in either Outlook or myDatavo Assistant.

Figure 11. Outlook Contacts Sync

This tab has the following options:

- **Enable Synchronization:** this will be disabled by default on installation or upgrade of myDatavo Assistant, and all the other settings will be grayed out. You should check this box to enable synchronization and make the other settings on the tab editable, as illustrated above.

- **Select Profile:** if you have configured multiple profiles within Outlook and have not set a default profile, the dropdown box will display an alphabetically sorted list of all profiles. You must select a profile before synchronization can occur, and you will see a validation error if you attempt to submit the page without selecting a profile.

If you have only one profile or have configured a default profile, this will be shown and the field will be grayed out.

- **Synchronize automatically every hour:** this will be enabled by default, and synchronization will occur automatically at the interval indicated. Turn off this option if you only want to run the synchronization process manually using myDatavo Assistant.
- **Direction:** this allows you to specify the direction in which you want the synchronization to occur. The options are Both directions, From Outlook only, and To Outlook only. The default option is Both directions.
- **Outlook Contacts Folders to Sync With:** this indicates which Outlook folders will be included in the synchronization. The default is Contacts. Note that you cannot deselect this Contacts folder.

You can use the **Choose** button to display a tree-view list of possible folders within your Outlook mail store, each with an associated checkbox to indicate whether this folder should be included in the synchronization.

Note: If you change your Outlook profile using the Select Profile button described above, the Folder list is reset to include just the default Contacts folder. You cannot use the Choose button if you have not selected a Profile.

Once you have completed the configuration, select **OK** to submit your changes.

- If you have enabled synchronization, you will then be prompted to either synchronize immediately, or disable synchronization.
- If you choose to synchronize immediately, a foreground synchronization will start.

3 Using myDatavo Assistant

myDatavo Assistant includes the following components to help you manage your account from your computer desktop.

- **Incoming Call Pop-up:** allowing you to see details of incoming calls as they arrive and optionally decline the call or redirect it to another number.
- **Notification Icon:** found in the notification area (usually at the bottom right of your screen next to the clock).
- **Toolbar:** embedded in the Windows taskbar (usually at the bottom of your screen).
- **Outlook Integration:** allowing you to make calls from within Microsoft Outlook. These components are described in more detail below.

These components are described in more detail below.

3.1 Incoming Call Pop-up

As described in section 2.4, you can configure myDatavo Assistant to display a pop-up each time you receive an incoming call on the telephone number you used to log in, as illustrated below.

Figure 13: Incoming Calls

This pop-up:

- displays the number of the caller, or shows **Unknown number** if this has been withheld by the caller
- displays the name of the caller if this can be determined
- allows you to dismiss the pop-up without affecting the call by pressing the **X** button
- allows you to decline the call by pressing:
 - **Send to Voicemail**, if you have the Voicemail service
 - **Decline call**, if you do not have the Voicemail service, when the caller will then hear a message that you are unable to answer the call
- allows you to redirect the call to one of the pre-configured telephone numbers in the dropdown box:

- if you have only configured one call redirection name/number, a button is provided instead, for example: 
- if you have not yet configured any call redirection numbers, you will see a link to the page where you can configure these
- indicates whether this is a Live Message Screening call.

Note: If you use Live Message Screening, you will see a pop-up for both stages of the LMS call—first for the original incoming call, and then for the subsequent LMS service call. You cannot use Call Redirection on LMS calls.

3.2: The Notification Icon

The Notification Icon indicates whether you have unheard messages, that you have unresolved conflicts between your Contacts Lists in myDatavo Assistant and Outlook, and whether or not you are connected to your account. You can also access myDatavo Assistant directly from the Notification Icon, without needing to visit a login screen.

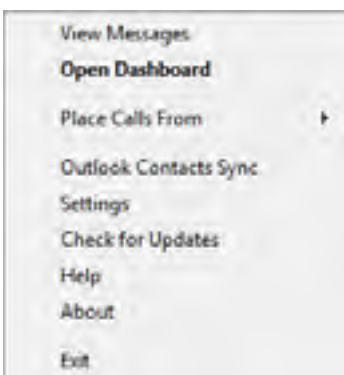

- The Notification Icon shows the following possible conditions.
 -  when you have unheard voicemails
 -  when you are connected to your account, but you have no unheard voicemails
 -  when there is an error connecting to your account
 -  when there are unresolved conflicts between your myDatavo Assistant Contact Lists and your Outlook contacts following synchronization.
- Double-clicking the Notification Icon opens myDatavo Assistant on the Dashboard display.
- Right-clicking the Notification Icon brings up the following menu.

Figure 14: Right-click menu of the Notification Icon

You can choose from the following options:

- **Open Dashboard:** opens myDatavo Assistant at the Dashboard display.
- **Open Messages:** opens myDatavo Assistant at the Messages display.
- **Synchronize Outlook now:** allows you to run an immediate synchronization between your Contact Lists in myDatavo Assistant and Outlook.

If you have already synchronized your Contacts and you have unresolved conflicts between entries in your Contact Lists, you will instead see the option Resolve Contact Synchronization Conflicts.

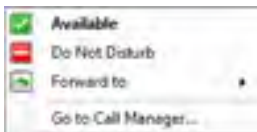

- **Configure:** opens the myDatavo Assistant settings page. For a full description, see section 2.
- **Check for updates:** looks for software updates.
- **Help:** opens the online help in your default web browser.
- **About myDatavo Assistant:** gives details about myDatavo Assistant, and includes buttons to generate diagnostics. For a full description, see the online help.
- **Exit:** closes myDatavo Assistant (which closes both the Notification Icon and the Toolbar).

3.3: The myDatavo Assistant toolbar

Note: If the myDatavo Assistant toolbar does not appear despite installing myDatavo Assistant, right-click on your Windows Taskbar, select Toolbars, and then click myDatavo Assistant.

The toolbar allows you to control your status and to initiate outgoing calls.

Figure 15: Setting your call services

Changing your status

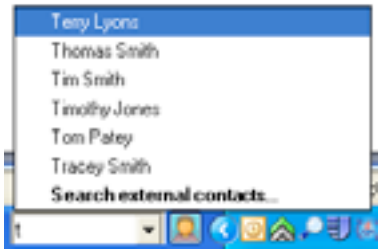

The icon at the right of the toolbar displays your current phone status. Hover over the icon for more information. To change your status, right-click on the status icon to select from the options presented.

For example, if you have the default set of available setting, the icons, and the corresponding menu options, are as follows:

-  Ring my phone: your phone will ring as normal.
-  Do not disturb: all calls will go to your voicemail and your phone will not ring.
-  Forward calls: will forward calls either to voicemail or to another number you can select or specify, rather than making your phone ring.

Making calls from myDatavo Assistant

Figure 16: Finding a contact to call

You can also use the toolbar to make an outgoing call. To start a call, begin typing in the text entry box inside the toolbar. As you type, the toolbar will automatically offer suggestions from your contact list.

If you are a member of a Business Group, these suggestions will include the names of any Business Group Line contacts as well as your personal contacts, unless you have explicitly excluded these on the Settings page as described in 2.1. Business Group Line contacts will be identified by an icon  and will also show the Department (if this information is available).

You can also enter a telephone number in the text entry box, whether that number is in your contact list or not. You should either enter the telephone number of the person you want to call (including the area code) or, if you are a member of a Business Group, you can enter an extension number.

Once you have found the contact you want, their details are shown as illustrated in Figure 17. (If the contact you have selected is a Business Group Line, this screen will show only the contact's Name, and Department if available; the View in myDatavo Assistant button is not displayed for BG Line contacts.)
